Book Library

The idea of the project is to develop a web-based book library system.

Basic Business Requirements

- All users of the system should have the ability to:
    - Create a list with the name
    - Add a book to a specific list
    - Delete a book from a specific list
    - Add some notes for each book.
    - Search for a Book by name in the list.
    - Search a list by name
- The user can see all available books grouped by some criteria like author, genre and etc.
- The user should be able to add a new book. Every new book has to have the following information:
    - Author
    - Genre
    - Title
    - ISBN

Advanced Business Requirements

- Login page
- Different roles for user and admin
    - User can:
        - Add new books
        - Screen for personal information
        - Can add/modify/remove personal information
        - Can create different lists of books
    - Admin:
        - Can add/modify/remove users.
        - Can add/modify/remove books
- Add an option for the user to edit his own details
- Logout with a redirect to the login page
